

Lakshmi Supriya

Lead Data Scientist | Palantir Foundry & Enterprise AI Solutions

☎ +91 8892418882 | ✉ supriya.priya963@gmail.com | [linkedin.com/in/lakshmi-supriya-g](https://www.linkedin.com/in/lakshmi-supriya-g) | Bangalore, India

Profile Summary

Lead Data Scientist with 8+ years of experience delivering enterprise AI, Palantir Foundry, forecasting, NLP, and advanced analytics solutions across aviation, retail, reinsurance, and pharmaceutical domains. Specialized in aviation MRO analytics, technical document intelligence, ontology-driven applications, and scalable data transformation workflows. Proven track record of building operational intelligence platforms, improving engineering data accessibility, and enabling data-driven maintenance decision-making.

Core Skills

- Machine Learning, NLP, Forecasting, Predictive Modeling, Computer Vision, Statistical Analysis
- Palantir Foundry, Ontology Manager, Workshop, Object Modeling, Relationship Mapping, Quiver, Contour, Pipeline builder
- AWS : S3, Glue, Git, Redshift
- Python, PySpark, SQL, TypeScript functions, Scikit-learn, Pandas, NumPy
- Aviation MRO Analytics, Technical Document Intelligence, Retail Analytics, Risk Engineering
- Foundry Workshop, Vega Charts, Plotly, Power BI, Matplotlib, Seaborn

Professional Experience

Hexaware Technologies | Team Lead – Lead Data Science & Palantir Foundry

Bangalore, India | Aug 2026 – Present

Client: Delta Air Lines | Domain: Aviation MRO (Maintenance, Repair & Overhaul)

- Partnered with cross-functional business and data engineering teams to design scalable Palantir Foundry-based aviation MRO solutions, improving operational efficiency and reducing manual engineering effort.
- Engineered automated extraction pipelines to process HTML and PDF-based EIPC/AIPC manuals, converting unstructured aviation technical documentation into structured analytics-ready datasets and significantly reducing manual data processing effort.
- Architected ontology-driven object models and relationship mappings in Palantir Foundry to represent engines, assemblies, subassemblies, and component hierarchies, improving engineering data accessibility and navigation.
- Designed and deployed an ontology-driven EIPC Component Intelligence Dashboard in Palantir Foundry Workshop, enabling maintenance and engineering teams to quickly search component metadata, technical references, and assembly relationships.

- Built searchable component intelligence workflows accelerating component traceability and improving accessibility of aviation maintenance information across engineering teams.
- Implemented interactive relationship visualization capabilities enabling hierarchical navigation across engines, modules, assemblies, and components for faster engineering analysis and troubleshooting.
- Transformed static aviation technical manuals into interactive operational intelligence applications, improving usability and reducing dependency on manual document navigation.
- Led and mentored junior developers and analysts on ontology modeling, Foundry workflows, and dashboard development best practices within enterprise aviation analytics initiatives.
- Collaborated with stakeholders to align business requirements, engineering workflows, and Foundry application development for scalable aviation maintenance intelligence solutions.

PwC US | Senior Associate – Data Scientist, AI & Foundry Solutions

Bangalore, India | Jul 2025 – Present

Client: Trader Joe's (Retail Industry)

- Developed a catchment-level sales forecasting and cannibalization framework in Palantir Foundry supporting data-driven nationwide retail expansion planning.
- Built scalable forecasting models using Python, PySpark, and 150+ demographic and behavioral variables to predict first-year store sales and identify whitespace opportunities.
- Designed interactive Foundry Workshop dashboards enabling scenario-based sales planning and visualization of retail whitespace expansion opportunities.
- Improved business decision-making capabilities by delivering analytics-ready forecasting insights for retail growth strategies.

Swiss Re | Associate Analytics Solution Engineer (Data Scientist)

Bangalore, India | Oct 2022 – Jul 2025

Domain: Reinsurance | Department: Risk Engineering

- Developed interactive Palantir Workshop applications integrating KPI dashboards and operational workflows for enterprise stakeholders.
- Automated extraction of risk classifications from unstructured PDF reports using regex, image-processing, and computer vision techniques, reducing manual review effort.
- Engineered custom Workshop widgets, Vega-based visualizations, and TypeScript functions supporting dynamic calculations and automated reporting workflows.
- Defined ontology objects, relationships, and write-back workflows using Palantir Foundry Ontology Manager to support operational intelligence applications.
- Improved stakeholder reporting efficiency through automated dashboard summaries and data-driven workflow enhancements.

Cognizant | Subject Matter Expert – Data Science

Bangalore, India | Apr 2021 – Sep 2022

- Led enterprise demand forecasting initiatives improving operational efficiency by 25% through predictive analytics and customer demand modeling.
- Developed Auto NLP and Auto ML frameworks automating preprocessing workflows and reducing analytics solution development time by 50%.

- Partnered with pharmaceutical clients to implement data-driven analytics optimization strategies.
- Mentored teams on AI, NLP, and feature engineering best practices for scalable analytics delivery.

Intellipaat Software Solutions | Tech Engineer – Data Science

Bangalore, India | Jan 2020 – Feb 2021

- Delivered practical data science and machine learning training programs to 100+ professionals.
- Built OCR-based entity extraction models achieving 80%+ extraction accuracy for educational demonstrations.
- Designed project-based ML learning modules improving hands-on learner engagement.

BI Insights Analytics Pvt Ltd | Data Scientist (Internship)

Bangalore, India | Dec 2018 – Dec 2019

- Developed LSTM-based time series forecasting models for automotive spare-parts demand planning.
- Improved inventory forecasting accuracy by integrating external market indicators and trend analysis.
- Enhanced operational planning capabilities through predictive demand forecasting solutions.

Projects

EIPC Component Intelligence Dashboard – Delta TechOps

Developed an ontology-driven platform transforming unstructured EIPC/AIPC manuals into searchable engineering intelligence systems within Palantir Foundry, improving component traceability and engineering data accessibility.

Catchment-Level Sales Forecasting Framework – Trader Joe's

Built ML pipelines and Foundry dashboards supporting whitespace opportunity identification and retail expansion analytics for strategic business planning.

Auto NLP Pipeline

Developed NLP automation workflows reducing preprocessing effort by 60% and accelerating analytics delivery timelines.

Education

PGDML – Post Graduate Diploma in Data Science

IIIT-B and UpGrad, Bangalore | Feb 2021 – Apr 2022

Master of Computer Applications (MCA)

PES University, Bangalore | Apr 2016 – Aug 2019
